Increased Recreational Use of the River

By Alan R. Hunt, Ph.D., Director of Policy and Grants

To combat and cope with the pandemic, we have changed the pattern of our lives. So too have the recreational patterns of the Musconetcong River. The spring started off generally the same with anglers coming out in search of trout, but when the flows were good for paddling, it seemed like there were fewer groups of boaters. As summer kicked in toward late June, the promise of cool water drew in more people at some river access points than usual. For a 46-mile-long watershed, there are about 60 public access points to the lakes and river. This makes the Musconetcong River easy to access and enjoy. And that's what hundreds of families did this year. While this is a great boost to our local eco-tourism, landowners of those public access points have a lot of sites to monitor and protect.

Also, with people come trash. It's an age old issue, but it's how we know so much about past people from archeology – from what they left behind. Can we ever eliminate it? Probably not. But there are things that can be done to monitor and manage recreational access points so they remain attractive resources.

MWA often receives inquiries and complaints from members of the public about trash or trespass issues. Staff and volunteers respond to these inquiries, and are in contact with the watershed's public land managers – state, county, and municipal. Each of these agencies have staff, including maintenance, rangers, and law enforcement who can respond to a wide range of issues. This year's issues ranged from parking on private property, to trash, to illegal campfires, and overcrowding – an issue in these times of social distancing.

Numerous reports on social media seemed to exacerbate the issue – or at least the perception of recreational overuse (e.g. crowding) or misuse (e.g. picnicking and swimming where allowed, trash, dumping, etc.). Curious about whether what we heard on social media reflected on-the-ground issues, both MWA staff and volunteer River Watchers surveyed access points this summer. We saw there were certain hot spots, like Point Mountain and Waterloo Road. In general, sites that are highly visible along County roads with water access seemed to have the most usage issues. But most (two-thirds) of the watershed's other 59 access points weren't crowded and were free of trash.

Because the Musconetcong River has a collaborative advisory group, the Musconetcong River Management Council, made up of municipal, county, and non-government groups, like the MWA and Trout Unlimited, we are able to respond to an issue like changing recreational patterns collectively. During a meeting held this summer, staff from the State Park Service, Wildlife Management Areas, and Hunterdon County Parks spoke about how each of their agencies were addressing the changed pattern of recreational use.

Hunterdon County was seeing increased usage of its riverfront properties, especially at Point Mountain Reserve. The demand for swimming, especially

Information sign posted by Hunterdon County at Point Mountain, Friday, September 11, 1:30 pm.

when beach areas at Round Valley or Spruce Run close, usually results in more traffic at Point Mountain. Swimming is not a permitted activity at Hunterdon County Parks. Their solution was to post a ranger, communicate the park rules, and post a traffic sign with park information in English and Spanish.

The Wildlife Management Areas, which include most of the Musconetcong's almost 60 public access points, are primitive. No campfires or swimming are allowed. The issue most common with the fishing access points were illegal fires and trash, along River Road in Bethlehem Township, for example. New signs on Watershed Management Area rules were posted, law enforcement staff patrols were increased, and maintenance staff responded to issues with trash.

Allamuchy Mountain State Forest has a number of access points along Waterloo Road, including at Saxton Falls. The sites are easy to access and also had trash issues. Previously, the State Park Police dug through trash for receipts

Welcome Karen!

Karen Buchanan has recently begun providing bookkeeping services to the MWA. She started her own bookkeeping business in 1996, after leaving her position as a Controller at a Real Estate Development Company to raise her two children. As her children grew, she grew her bookkeeping business. Now that her children are grown, and on their own, her business now consists of 18 non-profit organizations and 4 for-profit business accounts. Most of her accounts are in the environmental area, and she feels these organizations are contributing to provide a healthy environment (land, water, and air) for the now and into the future. ☺

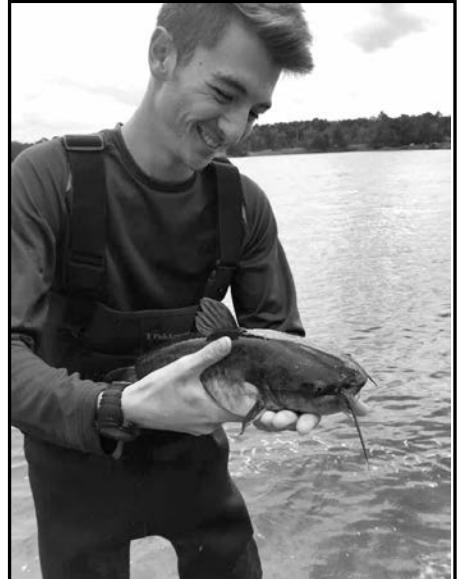

Karen Buchanan

MWA Bookkeeper

Welcome Joe!

Joe Hernandez joins the MWA as the New Jersey Department of Environmental Protection (NJDEP) AmeriCorps Watershed Ambassador this year. Joe has always had a great passion for aquatic life as he spent most of his days hiking and exploring around the waters in his hometown of Great Meadows, NJ. This interest developed into a career path that led him to Stockton University where he pursued a Bachelor's Degree in Marine Biology. While most of his internships took place on the coastline, he was happy to return to his home after graduation to bring back a wealth of knowledge he accumulated through his experience abroad and locally to share with his community to foster a mindset of stewardship of the region's watersheds. In his spare time, he is an enthusiast of fishing, bird watching, kayaking, photography, and creating videos for his educational YouTube channel, "Joe the Naturalist".

For the past 20 years, the AmeriCorps New Jersey Watershed Ambassador Program has sought to teach the importance of becoming stewards of our shared water resources and build careers in environmental conservation. This program, is administered by the "NJDEP's, Division of Water Monitoring and Standards." AmeriCorps is a national service initiative that engages more than 70,000 Americans each year in intensive service to meet critical

needs in education, public safety, health, homeland security, and the environment. To learn more about the NJ Watershed Ambassadors Program, visit the NJDEP website, <https://www.nj.gov/dep/wms/bears/ameri-corps.htm>, or email Joe at ambassador@musconetcong.org to learn more about the projects he plans to take on while serving as Watershed Ambassador for 2020-2021. ☺

Watershed Invader: The Spotted Lanternfly

By Christa Reeves, Water Quality Field Specialist

NJ is once again under attack by a foreign invader. The Spotted Lanternfly (*Lycorma delicatula*) is the latest unintended consequence of a global marketplace. This destructive insect is believed to have entered the country as egg masses on a stone shipment in 2012. The first infestation was found in Berks County, Pennsylvania in 2014 in a wooded area of Tree of Heaven (*Ailanthus altissima*), its host species.

The U.S. Department of Agriculture (USDA) is on the front lines of assessing and combating this latest invasive pest. Two of the MWA's former water quality interns, Jeff Branham and Levi Morris, are working for the USDA Department of Animal and Plant Health Inspection Service (APHIS). Both are working in the field to map and assess the spread of the Lanternfly and its invasive species counterpart, Tree of Heaven. One approach to reducing the spread of the fly is to remove or treat its preferred food source. However, what makes this pest so devastating, is that it feeds on a wide range of fruit, ornamental and woody trees, which could seriously impact the country's grape, orchard, and logging industries.

So, where is this threat? The most up-to-date information shows it in New Jersey, Pennsylvania, Maryland, New York, Virginia and Delaware. In New Jersey, the counties with confirmed cases are under quarantine restrictions and do not need to call to report sightings (Burlington, Camden, Gloucester, Hunterdon, Mercer, Salem, Somerset, and Warren). Outside of these areas you are encouraged to report them by emailing sf-plantindustry@ag.nj.gov or by calling 1-833-223-2840 (BADBUG0). While information will be put into a database, calls and emails will not be returned.

These pests are excellent stowaways and will hitch a ride, so if you are in an infested area, be sure not to transport firewood, landscaping plants, bricks, stone, metal, and other smooth surfaces. Also, thoroughly check your vehicles, trailers, and clothes to prevent accidentally moving a Spotted Lanternfly.

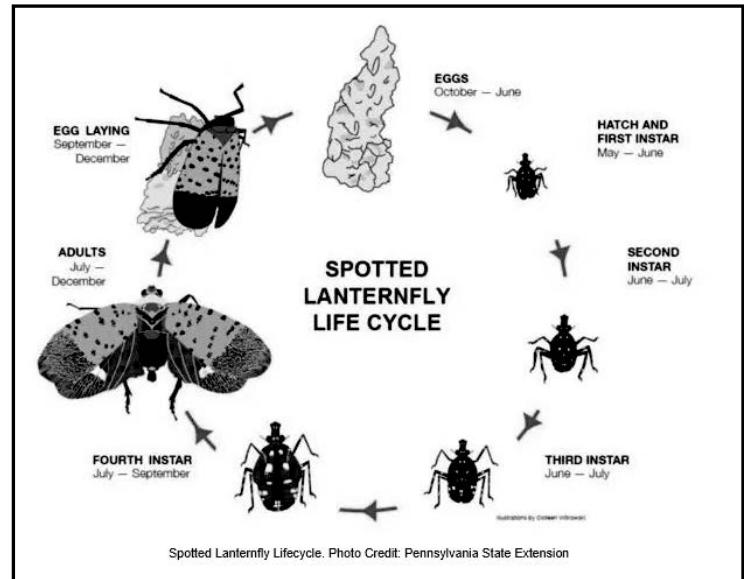

Even though this pest is spreading at a rapid pace, there are measures we can take to manage local populations and stop the spread. When preparing for the winter holidays, check outdoor items for Spotted Lanternfly egg masses. Scrape any egg masses into a plastic zippered bag

filled with hand sanitizer, then zip the bag shut and dispose of it properly. Inspect your trees and plants for signs of the Lanternfly, particularly at dusk and at night when they tend to gather in large groups on the trunks or stems of plants. Here are some low cost ways to help reduce Spotted Lanternfly populations:

- Vinegar in a spray bottle is a low-cost, environmentally-friendly insecticide
- A shop-vac will help you gather large amounts at once, then crush them or use an insecticide
- Sticky paper has been used, but may also trap beneficial insects or small birds
- Remove Tree of Heaven from your property to diminish its food source

Be sure to sweep up and dispose of the dead bugs properly. One of the most entertaining ways of gathering this pest is to place an empty plastic bottle in front of its face, they will jump in!

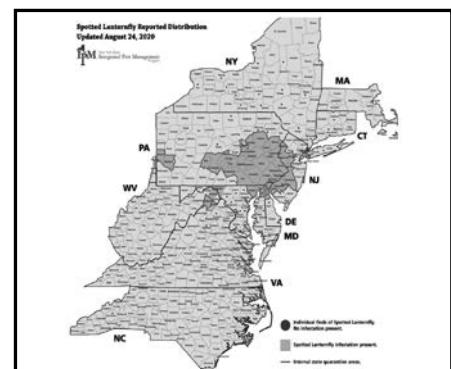

Native plants, while always important, become increasingly important in the fight against the Spotted Lanternfly. Native plants like milkweed, have a two-fold benefit. First, the Lanternfly will mistakenly eat this plant, poisonous to them, and die. Secondly, this native plant is the sole host for the migrating

Spotted Lanternfly Lifecycle. Photo Credit: Pennsylvania State Extension

Monarch butterfly and will support it in its caterpillar phase. It's a beautiful addition to any garden, so win-win-win!

The NJ Department of Agriculture (DOA) has crews surveying outdoor areas and will be wearing easily identifiable clothing. If they come to survey an area near you, they will only request to search outdoor areas where the Spotted Lanternfly has been reported and will not request any personal information other than to confirm the name of the property owner. Their website (<https://www.nj.gov/agriculture/divisions/pi/prog/spottedlanternfly.html>) has resources for homeowners as well as affected business owners, such as landscapers and vineyards. Learn how you can help stop the spread.

We Love Them. We Love Them Not.

By Tish Lascelle, MWA Board President

Finally, a few frosts have knocked back the tall grasses and it's once again more inviting to hike the Musky Trail. When everything in nature starts to look brown and dead, things that were previously hidden can be observed – things like nests (ever been surprised by a massive hornet's nest in a tree after the leaves dropped?), feathers from molting birds getting ready for winter, animal tracks as the ground gets wetter, and those masters of disguise, praying mantises. I came across this one hanging out on our new trail discovery signs (thank you William Penn Foundation for that funding). My amateur sleuthing tells me it's a Chinese Mantid – based on size and the vertical stripes on its forehead. The name is a give-away that it's a non-native mantid; they were introduced to the US about 1900. NJ's native mantid is the Carolina Mantid.

As a child of the 60's, I grew up believing – like many people still do – that killing a praying mantis was illegal because they were endangered. This was never true. But praying mantises are on the short list of insects we collectively seem to revere. It could be the whole 'looks-like-they-are-praying-better-not-make-God-mad' thing, but we also like them because they are master predators. These carnivores have a voracious appetite for other insects we don't like. For example, in the 60's mantises were used to control the gypsy moth population. This summer, I saw many posts on Facebook celebrating the praying mantis anew because they were seen preying on the dreaded Spotted Lantern Fly – whose only other known predator in NJ is a human with a fly swatter or an empty soda bottle. At last! We desperately need way to control the lantern fly!

But not so fast. The problem is, they are equal-opportunity insect gobblers – just as happy to eat beneficial ones like butterflies and bees. Darn. They eat lantern flies; we love them. They

eat good insects; we love them not. They are cool; we love them. They are non-native; we love them not. I'm so conflicted. In the end, I snapped my photograph of this one and left her alone – hoping she would eat several thousand more lantern flies before laying her eggs. A non-native lantern fly I would have mercilessly stepped on; I couldn't bring myself to do that to a non-native mantis.

Mantis egg case (ootheca).

Photo Credit:
Flickr: Dendrocia Cerulea

Back to the Musky Trail... I leave you with an assignment. On your next autumn trail hike (hopefully on our trail), see if you can find praying mantis egg cases. They will be on branches and they look like a brown stiff 'foam' mass. It is called an ootheca (gotta' love a word that starts with two vowels). If you find one, don't be tempted to bring it indoors or you will have 400 mini praying mantises climbing up your walls in the spring. And if you think you want to introduce more mantises to your garden to combat the lantern flies, be sure you only introduce the native Carolina mantis.

Tish shares her experiences as a regular blog series featured on www.musconetcong.org. Visit our website or subscribe to our Instream Updates to learn more about her biology observations from her hikes on the Musconetcong Wildlife Management Area trail in Asbury, Warren County. ●

The holidays are fast approaching and with them come popular shopping holidays, too. Black Friday sales are now virtual or in person, Small Business Saturday has become increasingly popular and inspires us to shop local, and Cyber Monday gives online shoppers a day to score some deals. But, if you find yourself among all of this holiday madness looking to give back, consider making a Giving Tuesday donation to the MWA.

Giving Tuesday has become a national day of movement to support local charities and non-profit organizations. Your Giving Tuesday donation to the MWA will allow us to continue our education and outreach programs including our citizen science program and recreation trips.

This year, we, like many others, were faced with challenges brought on by the COVID-19 pandemic. We made the difficult decision to move a lot of our major fundraising events and summer camp virtual and cancelled what we couldn't otherwise host. With your support, we can make up that missed income and continue our mission to protect and improve the quality of the River and watershed.

Visit our website to learn more about Giving Tuesday and to make your gift to the MWA. ●

Removing the Musky's Largest Dam

The Warren Mill dam is the largest on the Musconetcong River. At 330' wide and 39' tall, this massive structure was once used to power nearby factories, but now sits obsolete. The New Jersey Department of Environmental Protection (NJDEP) lists the Warren Mill dam as a Class I High Hazard dam because the failure of this dam could result in loss of life or extensive property damage.

The property owner reached out to the MWA to help remove two dams on their property in Pohatcong Township, Warren County and Holland Township, Hunterdon County. The first was the Hughesville dam. The success of this removal led to the return of American shad reported less than a year later.

MWA is now tasked with removing the larger of these two dams at Warren Mill, which is a more challenging process. The Warren Mill Dam is almost completely impacted by sediment and silt accumulation along its entire 3,300-foot impoundment. Because of the size of the structure and amount of sediment to be removed, there must first be a feasibility study completed to better determine how to safely move forward with this project.

Earlier this fall, MWA received \$260,000 in funding through a NJDEP 319(h) grant to complete this feasibility study and determine next steps with this project.

The main goal of 319(h) projects is to eliminate water quality use impairments in New Jersey's list of impaired water bodies. This pass-through funding from the U.S. Environmental Protection Agency (EPA) stems from the Clean Water Act, so MWA worked with partners and local stakeholders to build traction for this milestone effort.

Representatives from Congress recognize the Warren Mill dam removal as an important step in the ecological restoration of our Partnership Wild & Scenic River and that its removal will create more habitat for native aquatic wildlife, like the American shad.

(From left to right) Sandra Meola, Coalition for the Delaware River Watershed; Ed Potasnak, League of Conservation Voters, Alan Hunt, Musconetcong Watershed Association; Representative Bonnie Watson Coleman; Tom Wells, the Nature Conservancy; Jim Waltman, The Watershed Institute; and Eric Schrading, NJ Field Office of the U.S. Fish and Wildlife Service

While a project of this scale...will take years...MWA is excited to take the first step in developing a plan to move forward. Removing the Warren Mill dam will prevent local flooding and make this section of the lower Musconetcong River more assessable to kayaking and canoeing. For more information on this continuing project, visit our website or follow the MWA on Facebook, Instagram, Twitter. ☺

Clean As You Can This Fall

As MWA adjusts to the challenges that the pandemic brought on, we made the difficult decision to cancel or postpone most of our spring events, one of the most important being our Annual River Cleanup. Each April, hundreds of volunteers sign up to clean along the Musconetcong River in parks, at local businesses, along Watershed trails, and at our River Resource Center.

Despite having to postpone this milestone grassroots event, there was no shortage of residents and out of town guests visiting our watershed, recreating, and unfortunately, creating increased garbage.

Because of this increased need to clean up our watershed, and the significance this event has on our organization, we have reimagined our River Cleanup to our Clean As You Can event that is taking place now through the end of the year.

Volunteers help keep the Musky clean along Penwell Road in Mansfield Township, NJ.

Last year, we had a record-breaking year with nearly 450 volunteers coming out to clean from Lake Hopatcong down to the Delaware River confluence. Volunteers collected over 350 bags of trash and recyclables as well as other large items like refrigerators, car parts, and 33 tires!

Sign up with a small group of friends or family to clean at a spot that is most comfortable to you. MWA will still provide you with trash bags and gloves, and we will arrange for trash to be picked up by haulers if you are unable to dispose of it properly on your own.

In turn, we ask each group to share your experience with us by submitting a short form and by using the hashtag #Clean4theMusky on Facebook, Instagram, and Twitter. You can also tag @MuskyWatershed on social media and get involved with this in person and online hybrid season of giving back.

For more information, or to register, visit www.musconetcong.org/river-cleanups or email cleanups@musconetcong.org and a member of our Cleanup team will help you choose your supply pickup time and schedule your cleanup site. ☺

Leaving a Legacy

As the holiday season approaches, we often reflect on the good we can put back into the world. We invite you to talk with us about leaving a bequest to the Musconetcong Watershed Association. Planned gifts help us plan for the future, and your gift lives on through our continued water quality monitoring, youth and adult education programs, river restoration projects, and so much more.

Even as we are physically distanced from one another, we can come together to ensure that clean water is protected in the Musconetcong watershed. Call (908) 537-7060 or email info@musconetcong.org to set up a virtual or in-person meeting with a member of our Board or Executive Director. Working together, we can improve water quality for generations to come. ●

The Musconetcong is Designated a National Recreational Trail

For the past few years, MWA staff has been working with partners at the Lake Hopatcong Foundation (LHF) and Mohawk Canoe Club (MCC) to get the Musconetcong designated as a National Water Trail. Recently, the U.S. Secretary of the Interior approved this designation and the Musconetcong is the newest National Water Trail.

Along with being a Partnership Wild & Scenic River, this National Water Trail designation will help us to promote safe public access to the river, Lake Hopatcong, and surrounding trails, while creating more recreational opportunities in the watershed.

The Musconetcong River flows through state and county parks, historic hamlets, nature preserves, and through scenic agricultural landscapes. Through this designation, MWA hopes to increase eco-tourism in our region and further protect our watershed resources.

In conjunction with becoming the Musconetcong National Water Trail, MWA has been working with LHF and MCC to update our Water Trail Guide, which displays access points along the river for fishing and paddling. This updated brochure extends the river to show public access points in Lake Hopatcong as well as all the way down

The Musconetcong River downstream from the former Hughesville dam site in Pohatcong Township, Warren County and Holland Township, Hunterdon County.

to where the Musky meets the Delaware River. Along with the facilities and estimated length of trips, paddlers can also learn the difficulty of each trip along the lake and river.

MWA has also been working with Warren County to develop a virtual story map of the river that will expand on the information provided in the brochure. If you would like to be the first to learn when the interactive story map is live, subscribe to our Instream Updates by emailing info@musconetcong.org. To learn more about this recent designation, or to download a virtual copy of the brochure, visit our website. ●

'A Busy Year'

continued from page 1

or other identifiable information and charged people with illegal dumping.

What can you do to help?

- Reporting recreational issues matters! Otherwise, agencies do not know there is an issue.
- It is best to report to the land manager directly. If you can't figure out who that is, we can help. Call (908) 537-7060 or email info@musconetcong.org.
- Participate in the River Clean Up by visiting www.musconetcong.org/river-cleanups.
- Follow and promote *Leave No Trace* principles by visiting <https://lnt.org/why/7-principles/>.
- Leave a trail or parking area better than you found it.
- Consider adopting a River Mile by contacting Nancy Lawler at nancy@musconetcong.org.

Information sign posted by Hunterdon County at Point Mountain, Friday, September 11, 1:30 pm.

MWA is developing new recreational information that will highlight the many river access points and their appropriate uses. These resources are works in progress, begun before COVID-19, and supported by the William Penn Foundation and the National Park Service. They include an online Water Trail map, an online story map with photos and descriptions of each access point (including distance to water, parking area size, restroom availability, and other amenities) linked with actions to protect the watershed, and a National Park Service brochure for the river. We hope that this helps spread word about how to safely enjoy the river. With new river users come new opportunities to expand support for the river's protection and the MWA. ●

SAVE THESE DATES!

The Musconetcong Watershed Association (MWA) takes the health of our members, staff, and board seriously. We advocate for the health of the river because clean drinking water improves the health of communities. We have been closely monitoring the social distancing guidelines on group gatherings in New Jersey and have adjusted many of our events accordingly. When possible, we have offered online alternatives, but many of our events have been postponed or cancelled.

Below are the fall events we are hoping to run, but please keep checking our website or subscribe to our Instream Update emails for the latest updates. You can subscribe to our Instream Updates by emailing info@musconetcong.org and "Subscribe" in the subject line. We hope you and your family stay healthy and safe during this uncertain time, and we look forward to seeing you when we can do so safely.

Saturday, November 28 Point Mountain Hike. Meet at 10 am or 1 pm. Each year MWA sets aside the Saturday after Thanksgiving to gather as a watershed community and hike Point Mountain! This year is no different, it will just look a little different! Due to the ongoing pandemic, we will be limiting the number of hikers to 10 to more easily ensure proper physical distancing on the hike. We will also require participants to have/wear masks when they are not able to maintain the appropriate distance. To accommodate more hikers, we will be offering this hike twice! The first hike will be departing at 10 am, and the second hike will depart at 1 pm. Hikers will use the Ridge Trail, which cuts through the forests and a mountain stream. A scenic overlook along this trail provides a view of distant mountains and farmland in Warren County. The trail is diverse and challenging at times, and includes a steep and rocky incline! This is a good hike for beginner and expert hikers. Bring a snack and water to the gravel parking lot on Point Mountain Road, 0.3 miles from Route 57. To ensure your spot, please email kyle@musconetcong.org to register! MWA members are free! Non-members are asked to donate \$3 per person (Not more than \$10/family).

COMING SOON Asbury Mill Tours. Time TBD. Get an exclusive sneak peek of the restoration work being done on the Asbury Mill by touring with an MWA volunteer tour guide. These tours will show you all of the work that has been done on the interior and exterior so far, what is planned, and how you can help keep this important project moving forward. Check back for ticket registrations, times, and more.

We've reached another milestone on the road to our goal of preserving and transforming the historic Asbury Mill. Someday, this circa-1867 building, listed in both the National- and State-recognized Asbury Historic District, will open its doors to visitors from throughout the Musconetcong River Watershed and beyond.

It will be an Interpretive Center, telling the story of human settlement in this area over more than 13,000 years, including its Paleo-Indian and Native American settlement, agricultural and industrial uses over the years, and current regional restoration and tourism-focused economic development efforts. Designation of the Musconetcong as a nationally-significant "Wild & Scenic" River will be celebrated as recent proof that this Watershed area is truly a special place.

Visitors to the Center will learn about, be connected with, and become inspired to protect and restore the unique natural, scenic, cultural and historic resources in this area. On top of all that, the fully restored Mill will provide new office space for a growing and ever more effective team at the Musconetcong Watershed Association.

Recent work on the Mill, including septic system improvements, electrical wiring and mandatory safety measures, weren't glamorous, but they are significant. We can now apply for a limited use occupancy permit from the County, and then.... We can open our doors to you!

Except that it's DARK in there. And we are eager to show off all that has already been accomplished. So hey, can you help us "Light Up the Mill?"

Visit our website to learn more about how you can help us buy lights for the historic Asbury Mill.

For more information or to register for any of these events, please email info@musconetcong.org or call (908) 537-7060, unless otherwise noted. MWA River Resource Center (RRC) is located at 10 Maple Avenue, Asbury, NJ.

The Musconetcong Watershed Association

The Musconetcong River Valley is rich in scenery, history, natural resources, and recreational opportunities. The river rises up in Lake Hopatcong - New Jersey's largest spring-fed lake - and is shadowed by 1,000-foot Highland ridges and slices through a deep, limestone river valley, flowing swiftly to the Delaware River. Along the way the "Musky" passes by state and county parks, bustling towns, vital industries, historic villages, and some of the most productive farmland in the state.

The Musconetcong Watershed Association (MWA) is a non-profit organization formed in 1992 to protect and enhance the Musconetcong River and its related resources through advocacy and environmental education programs, scientific research and river restoration projects. The MWA scope spans the 158 square-mile Musconetcong River Watershed, and includes portions of four counties, and all or portions of 26 municipalities. The Musconetcong River became part of the National Wild and Scenic River System in 2006.

MWA members are part of a network of individuals, families and organizations who care about the Musconetcong River and its watershed. They are kept informed about issues concerning the river and its related resources by receiving quarterly issues of the Musconetcong River News.

MWA Membership Application

Please enroll me as a member of the Musconetcong Watershed Association in which I will receive membership benefits and publications. I have enclosed a check payable to MWA for the membership category listed below:
